2 ✦ Dressed Overall
Landfall, widened — the whole agenda wears the spread, and the far end is cold, not bone · colorful at 08:00, warm only near Now

Landfall won; Dead Reckoning is retired. This turn goes the other way from the Late ramp: a ship dressed overall flies a flag from every halyard, and here every event's time wears its own distance — **a cool-to-warm spread down the list, cold blue for the far evening, the sail's gold only inside the hour, balmy only at Now.** And the pigment is not new: the widened ladder is the frozen thermometer read as time — six hours away is 6°, Now is 19°, and Calendar can never reach hot. Below: the widened ladder and its laws (2a), the five faces at 14:40 (2b), the morning proof at 08:12 with the restful clear day (2c), both walls (2d), and the whole day under your thumb (2e).

every time wears its distance → far is cold, never blank → the soonest is the only warmth → capped at balmy, and never a pane

The list becomes a timeline
Sorted ascending, the spread runs warm-to-cold down the card: the near top, the far evening blue at the bottom. The day's shape is readable before a single word is — a packed afternoon looks packed, a distant one looks distant (2b).

One event still pops
Everything beyond the hour sits cool of mild, so warmth keeps its meaning: across the room, gold still says "soon" and balmy still says "starting" — now against a cool field instead of an empty one (2d).

No new pigment — the thermometer read as time
Six stops, all frozen: 6° cold for six hours out, 13° neutral at ninety minutes, mild at the hour, gold inside twenty, balmy at Now. Hot and swelter stay Linear's breach and Claude's overage — Calendar's day runs 6° to 19° and no further (2a).

Bone retires to chrome
Captions, titles, "+N more" keep the bone hierarchy; a time numeral never wears it again on this card. Brightness belongs to names, chroma to time — the emphasized title stays the brightest text on the card (2a).

Scope: geometry, data and states unchanged from turn 1 — Thursday, July 9 2026 in Quito, the Work calendar, S/M/W/L footprints, tabular figures. Skeleton, stale, error, connect and choose carry over from 1d verbatim; only the two calm empties and the all-day chip recolor here. The spread is discrete inks on discrete figures — never a gradient fill, never a pane.

2a The widened ladder — six stops, all frozen
the cold half of the thermometer joins the ramp; the warm half is turn 1, untouched

THE IMMINENCE SPREAD · --WHEN-*

	--when-dawn	--when-away	--when-day	--when-soon	--when-near	--when-now
	🟦	🟦	▨	🟨	🟧	🟧
	#7FA3D9 (= 6°)	#8CA9C7 (= 10°)	#B3AFA0 (= 13°)	#C8B183 (= mild)	#D9A458 (= --ink-sun)	#DC9853 (= balmy)
	six hours and beyond, any other day, the all-day band, the clear day	three hours — the afternoon seen from breakfast	ninety minutes — the neutral crossing, cool lets go	the hour mark — first warmth, the bell striking once	twenty minutes — the sail's gold	Now — still the warmest it ever gets

Piecewise-linear between 6h → 3h → 90 → 60 → 20 → 0 minutes, lightness pinned high, exactly the thermometer's own blend. The spread rides the blue–yellow axis, which protanopia and deuteranopia both preserve — this ladder is more colorblind-safe than turn 1's gold-against-bone, not less.

WHAT CHANGED, WHAT HELD

1. In the agenda, every time numeral wears its event's distance. On the glance card the hue lives in the hero alone — the numerals beside it stay quiet so the check is always neutral.
2. All-day events wear the dawn band: a 14% dawn wash (#252A37, the accent-muted recipe) with dawn ink — context, never a deadline. A chip, not a pane.
3. The clear day rests in dawn: "Nothing left today" wears #7FA3D9, so even nothing-to-say is never white on this card.
4. Dawn is not the accent: #7FA3D9 is the thermometer's 6° — grayer and lighter than #6E8BFF, which keeps its saturation for the one thing a tap repairs.
5. Held: one emphasis, the when ladder's warm half, numerals beside every hue, the balmy cap, trouble as a dot, accent only on repair, and never a pane.

Next Event · S — inside the hour the glance is identical to Landfall. The spread only shows where a list shows.

Next Event · M — one change from turn 1: the "then" peek's numeral wears its own distance. The spread reaches even the footer.

Agenda · M — gold, then cooler, then cooler still: 15:00 #D9A458 · 16:30 #AAAEA9 · 17:15 #97ABBC. The band sits dawn-cool at the top.

Agenda · W — the banner reads left-to-right as warm-to-cool now, so the fade carries meaning instead of just hierarchy: the row IS the timeline.

Agenda · L — the time column carries the whole spread; titles and locations keep the bone hierarchy, and the one bright title still marks the one emphasis.

2c Never bone in the morning — 08:12, nothing near
the whole day still ahead reads as a cool spread; and when it's all behind, the empty rests in dawn

`08:12 · 6 left · next ink #BBB094`

Every row's ink computed by the six frozen stops; the soonest carries the when; past events fall away; the end of the day rests in dawn. Tweaks: swap the cool end for rain's teal #6FB8C9 — the pick is the thermometer's own cold.

The argument for Dressed Overall: the Late ramp made Calendar honest but mute for most of the day — informative for one hour, indistinguishable from bone for the other twenty-three. The spread keeps every promise the freeze made — **hue only as a reading, numerals always beside it, one emphasis, capped two stops short of trouble** — and adds the reading the ramp threw away: distance itself. Cool is low-arousal by construction, so a colorful morning still reads calm; warmth still means only "soon." And it is one token family: pin the cold stops to bone and this collapses back to Landfall; pin them all and it is Dead Reckoning. One freeze, three postures.

Next: freeze the six --when-* stops in unistyles.ts sharing the thermometer's blend fn; verify dawn / away / day stay distinct at 13px on the low-DPI wall in daylight (they sit ~30 units apart in blue — confirm on device); check dawn-vs-accent at small sizes so a cool time never reads tappable; confirm the band wash against cheap-panel black crush; then re-cut the wall with Linear and Claude seated to judge the whole room's color budget — Calendar cool, Weather's sky, one gold, and trouble dots only.

---

1 ✦ Ship's Bells
Google Calendar from zero — the glance and the list · the bone face and the warming face, argued both ways · every footprint, every state, the phone and the wall

Aboard, nobody reads the schedule — the bell tells you the watch is changing. That is the whole question for Calendar: in the Weather freeze we said a meeting isn't hot, so the safe face is entirely bone. But imminence is a reading — the one reading Calendar owns, and the only one that changes by the minute. So here it is both ways, same geometry, same data, one ink apart: **Dead Reckoning, where hierarchy is type and position alone, and Landfall, where the single next event's when warms as it approaches.** Below: the anatomy and the when ladder (1a), the bone face (1b), the warming face with the approach (1c), every state as one system (1d), the phone and two walls (1e), and the argument, with the ramp live under your thumb (1f).

Imminence is the only reading → only the when may wear it → the clock numerals always beside it → bone the rest of the day, and never a pane

The glance and the list share one emphasis
Next Event answers one question — do I need to move? — so its when is the hero. Today's Agenda answers what's left; its single emphasis is the same soonest event, carrying the same when. One event, one emphasis, on both cards, always.

Warmth is rare by construction
The ramp begins at the hour mark, so an event warms its card for sixty minutes and no more. Beyond the hour, Landfall and Dead Reckoning are the same card — the argument is only ever about the last hour (1c).

A ladder cut from the thermometer
No new pigment. Landfall's ramp is the frozen scale's middle — mild #C8B183 at the hour, the sail's gold #D9A458 inside twenty minutes, balmy #DC9853 at Now — and it stops there, two stops short of trouble. Hot stays Linear's breach; ember stays over-budget (1a).

One token decides it
The two directions share every pixel of geometry; A is B with the four --when-* tokens pinned to bone. Whichever way the room votes, the freeze is one line in unistyles.ts, not a redesign (1f).

Scope: Transit geometry unchanged — S 173×96 · M 173×204 · W 358×96 · L 358×204, the 1024×640 wall, the 390 phone. Thursday, July 9 2026 in Quito, the Work calendar, 24-hour clock, tabular figures throughout. Calendar never wears a pane — the pane is the sky and belongs to Weather alone. At most three hues on a card, no gradients, no shadows, no spinners; the hero value is the brightest text on its card. Web stands in for React Native.

1a The anatomy, the when ladder, the agenda law
what the app derives from a start time, and the four tokens the whole argument turns on

THE WHEN — COPY RULES

started, first ten minutes	Now
under an hour	in 42 min
later today, whole hours	in 3h
tomorrow	Tomorrow
this week	Mon
all-day, today	All day

At every step the clock numerals sit beside the when — 15:00 next to "in 20 min" — so a hue is never the only carrier, and a glance can always be checked.

THE AGENDA — ORDERING LAW

1. All-day events pin to the top as a quiet chip — they are context, not a deadline.
2. Timed events sort ascending; what has ended drops off. The list is what's left, which is why its empty says so.
3. The soonest upcoming event is the one emphasis, and it carries the same when as the glance card. Never two.
4. Overflow folds into "+N more" — a count, not a scroll. The card never clips a row mid-body.

THE IMMINENCE LADDER · --WHEN-*

	--when-far	--when-soon	--when-near	--when-now
	⬜	🟨	🟧	🟧
	#F4F4F0 (= --text)	#C8B183 (= mild)	#D9A458 (= --ink-sun)	#DC9853 (= balmy)
	beyond the hour, and any other day	the hour mark — first warmth, a step like a bell	twenty minutes — the sail's gold	Now — the warmest it ever gets

Linear blend between stops, exactly like the thermometer, lightness pinned high. The ladder caps at balmy on purpose: hot #E08348 stays Linear's breach and ember #D65A3C stays over-budget, so Calendar's warmth can never be mistaken for trouble. Dead Reckoning is these same four tokens pinned to bone.

--when-far · --when-soon · --when-near · --when-now — these names go into unistyles.ts whichever direction wins

Next Event · S — the bedside glance. The when is the hero; the numerals ride beside the title.

Next Event · M — room for the span, the room, and one faint "then", so the glance answers "and after?" too.

Agenda · M — the tall column. One row is bone-bright and carries the when; the rest recede a step.

Agenda · W — the banner reads left to right like the forecast strip, and fades the same way; only the first cell speaks at full brightness.

Agenda · L — rows gain a location line and a right-aligned when on the one emphasized row. Hairlines split rows, as everywhere in the app.

The case for bone: this face already glances. Weight, scale and position do all the work — the when is the biggest thing on the card, the emphasized row is the brightest line in the list — and the wall stays perfectly disciplined: Weather keeps the only pigment, the Clock keeps the hour. If a meeting isn't hot, this is the whole design.

1c Landfall — the warming when
direction (b) · same five faces, one ink apart: the single next event's when rides the ladder; everything else stays bone

16:30 Interview debrief

11:10 — four hours out. Bone. Landfall and Dead Reckoning are the same card here.

14:00 — the hour mark. First warmth, mild, a deliberate step: the bell striking once.

14:40 — twenty minutes. The sail's gold: time to wrap up what you're doing.

15:00 — Now. Balmy, the ceiling. From across the room a warm mark means "something is starting."

15:12 — ten minutes in, the card steps aside to the debrief and the warmth is gone. Bone again.

This is the whole cost of Landfall: one hue, on one figure, for at most the last hour before each event — and "Now" holds for ten minutes, then lets go. A five-meeting day is warm for a few short stretches and bone the rest; the card never nags, it only leans in.

1d Every state, one system

Connected · 4 found

Stale — an amber dot and the fetch time. The when still counts down locally, so the data stays useful.

Error — a red dot and the last good fetch, no sentence of apology. The list holds its last truth until it can be refreshed.

Disconnected — the one accent, because a tap fixes it. The caption drops "Work": no calendar is known yet.

Needs a calendar — connected but unassigned. Same accent, same reason: it's a control, not a reading.

The trouble ladder never touches the when: stale is an amber dot, error a red dot, both beside a timestamp in the caption row. Accent #6E8BFF appears only where tapping repairs something — connect, choose — never on data. So even in Landfall a card carries at most three hues: one when, one dot, and bone.

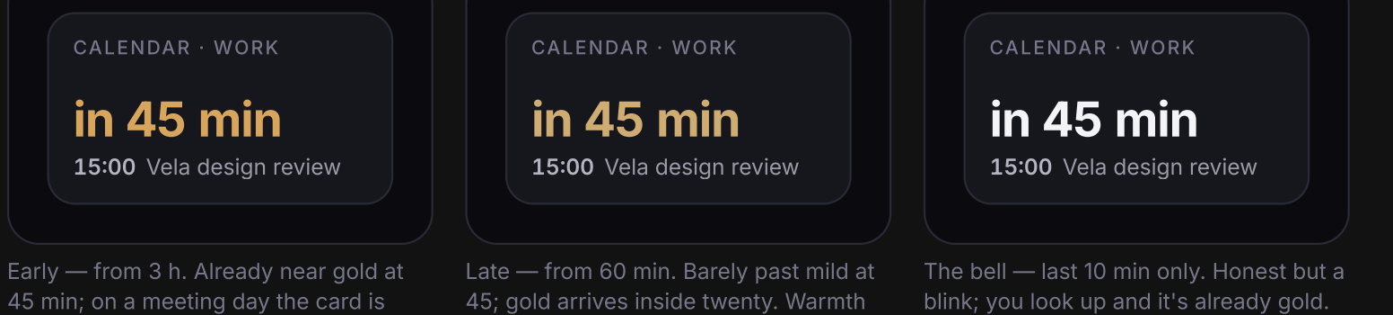
The proof. Rain keeps the sky cold, the Clock stays bone, and exactly one warm mark sits on the wall — balmy, beside its numerals, echoed small in the list. From across the room the sentence is complete without reading a word: something is starting. This is what bone alone cannot say at that distance.

1f The argument — and the ramp under your thumb
we argue for Landfall with the late ramp; here is where the ramp could start, and a live card to test the feel

WHERE THE RAMP STARTS · THE SAME MOMENT, 45 MINUTES OUT, THREE SETTINGS



CALENDAR · WORK
in 45 min
15:00 Vela design review
CALENDAR · WORK
in 45 min
15:00 Vela design review
CALENDAR · WORK

15:00 Vela design review

Early — from 3 h. Already near gold at 45 min; on a meeting day the card is warm half the day. Chatty.

Late — from 60 min. Barely past mild at 45; gold arrives inside twenty. Warmth means "soon", not "someday". The pick.

The bell — last 10 min only. Honest but a blink; you look up and it's already gold. Too late to be useful.

The argument for Landfall: imminence is the one reading Calendar owns — the only figure on the card that changes by the minute — and the law already covers it: **the hue is a reading, the numerals sit beside it, one event carries it, and the ladder is cut from frozen pigment, capped two stops short of trouble.** "A meeting isn't hot" still holds — nothing here is hot. It is, at its very warmest, balmy: the temperature of walking to a room. And because the ramp starts at the hour, the card spends most of its life as Dead Reckoning anyway. If the room votes bone regardless, ship (a) by pinning the four tokens — same faces, same freeze, one line changed.

Next: land --when-* in unistyles.ts (four tokens, one blend fn shared with the thermometer); verify mild-vs-bone legibility on the low-DPI wall tablet in daylight; protanopia and deuteranopia pass on mild→gold→balmy (lightness is pinned — confirm); decide the Now dwell (ten minutes here) against real meeting habits; confirm the Now hand-off when back-to-back events overlap; then re-cut this wall with Linear and Claude seated in the empty seats so the room's whole warm budget is judged at once.
