1 ✦ The Manifest

the Linear cards, from zero — four directions for My Issues · two takes for Current Cycle · still until work moves

The stillest cards yet, and the first that are lists. Work data moves in steps, so the faces hold perfectly still and **spend their whole motion budget on the settle — the moment an issue closes or the ring gains a tick**. Four directions for My Issues: Muster is the settled roll call, the count leading. The Heading bets the card on the one issue to pull next. Stowage packs the whole ledger dense — the provocation. Soundings tells the workload in marks, not words. Current Cycle brings the one accent: two takes at 1f, one continuous, one honest to the tick. The everyday states are designed, not apologized for (1g); the call is 1h.

Space runs tight → the due date goes first → then the state word → then the title truncates → the count, the marks, the progress — never

The caption is the project, not the widget
LINEAR · PLATFORM & APP SHELL on the roomy faces; the small faces keep only the place, the way Weather keeps Quito. Current Cycle carries the team key — AOD, straight from its own identifiers.

Priority is shape, never hue
Five marks, one ink (1a): three faint dashes, then one, two, three rising bars, then urgent — the only filled form on any card. Status hues stay reserved for the stale and error dots.

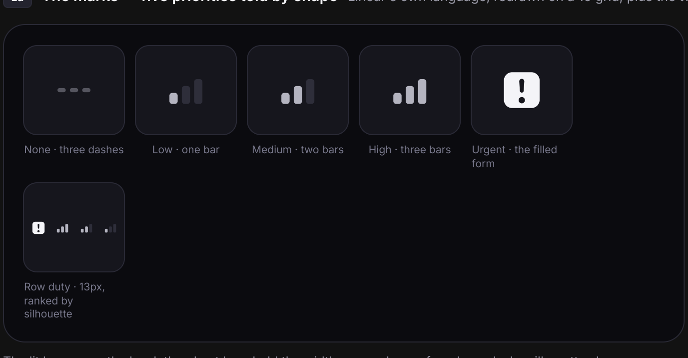

Still until work moves
Nothing here animates on its own. Three honest motions only: the in-flight refresh breath, a count that settles to its new value, a ring that eases — or ticks — to its new fill. A list that isn't changing sits still.

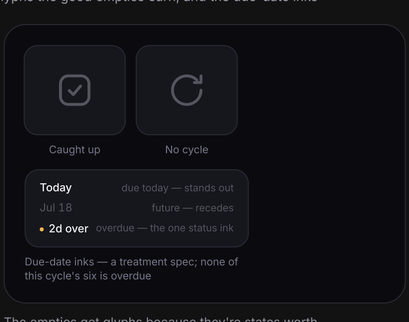

One accent, spent once
My Issues is fully monochrome — its count is the brightest thing it owns. The accent lives in Current Cycle's ring: the fill bright, the remainder the same accent dimmed. At night both dim with the wall; ember stays the Clock's alone.

Scope: faces render at phone scale on the real grid — two 173px columns of 96px rows, as The Watch set them (S 173×96 · M 173×204 · W 358×96 · L 358×204, 12px gutters); the wall is a 1024×640 stage. One Monday mid-cycle — July 13, 2026, 09:40, with a night check at 21:40. Project "Platform & App Shell", filter open, 6 assigned. Cycle 12 runs Jul 6 → Jul 17: 13 of 21 done, 62%, ends Friday — in 4 days. My Issues refreshes ~5 min, Current Cycle ~10. Web stands in for React Native.

1a The marks — five priorities told by shape

Linear's own language, redrawn on a 16 grid; plus the two glyphs the good empties earn, and the due-date inks

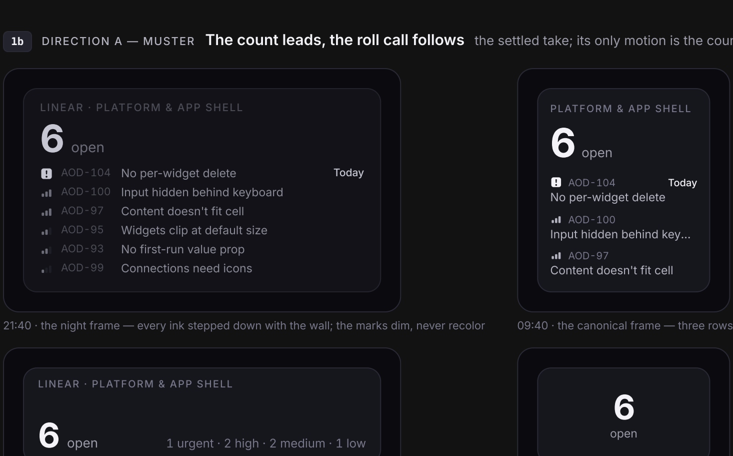

The lit bars carry the level; the ghost bars hold the width, so a column of marks ranks by silhouette alone — no reading, no hue. Urgent is the only filled form on any Linear card, the loudest thing short of the count itself. At night every mark steps down with the text; nothing recolors. Priority never becomes a colored-dot rainbow: the five levels must survive a monochrome wall from across a room.

The empties get glyphs because they're states worth designing, not apologies. The state word ("In Progress", "Backlog") stays a filter concern — the qualifier on the count already said it, so rows never spell it out.

1b DIRECTION A — MUSTER The count leads, the roll call follows

the settled take; its only motion is the count settling when an issue is assigned or closed

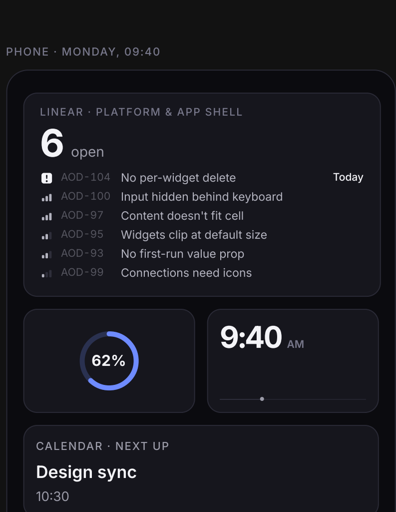

21:40 · the night frame — every ink stepped down with the wall; the marks dim, never recolor

09:40 · the canonical frame — three rows, two lines each; the due date rides the identifier line

the banner — the count plus a one-line breakdown; Muster's answer to the awkward 2×1

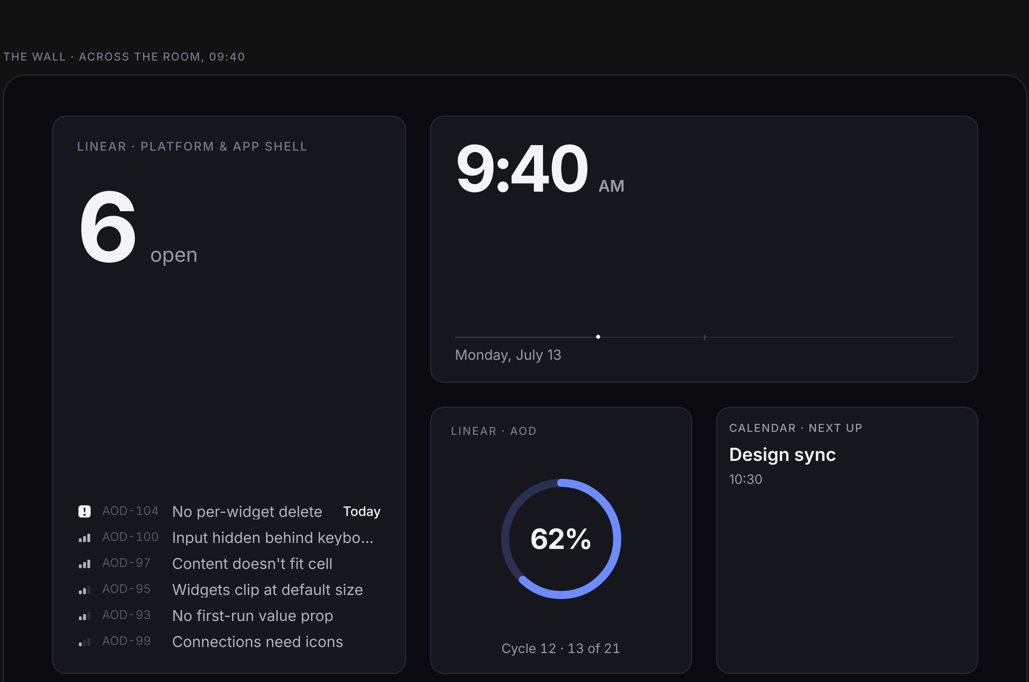

the glance — count and qualifier, nothing else; every direction shares this Small but Soundings

PHONE · MONDAY, 09:40

The Large is the roll call in full: all six, ranked by mark. Only AOD-104 carries a date, so only AOD-104 says Today — a due column that is mostly silence is the point. Below it, the cycle's ring keeps its own count.

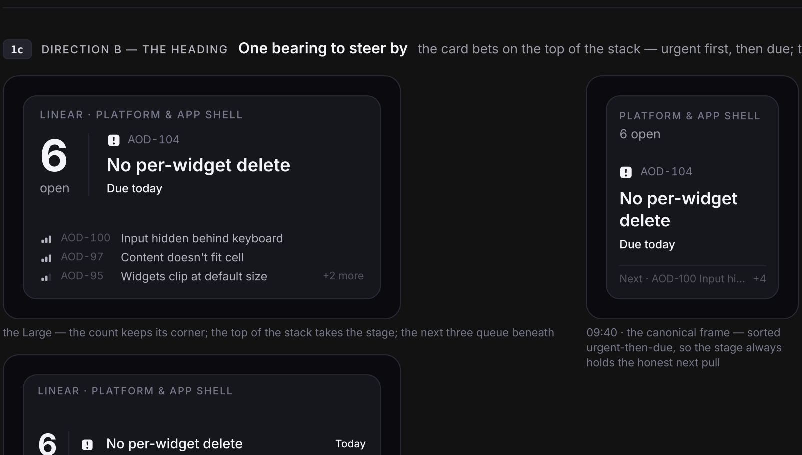

THE WALL · ACROSS THE ROOM, 09:40

From the sofa the read is 6, then the time, then 62% — three figures, one saccade each. Muster is the settled take: zero risk, every datum placed. Its ceiling is honest too — at distance the roll call is furniture; only the count carries the room.

1c DIRECTION B — THE HEADING One bearing to steer by

the card bets on the top of the stack — urgent first, then due; the one deliberate rule-bend: the title outshines the count

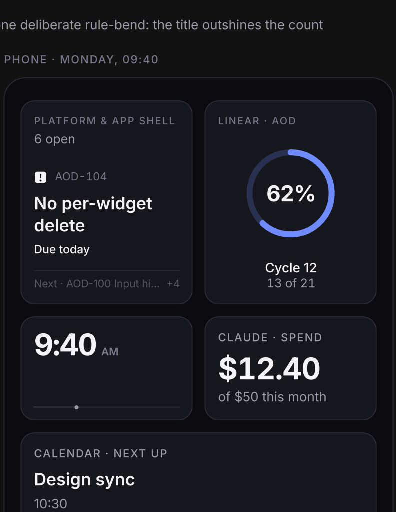

the Large — the count keeps its corner; the top of the stack takes the stage; the next three queue beneath

09:40 · the canonical frame — sorted urgent-then-due, so the stage always holds the honest next pull

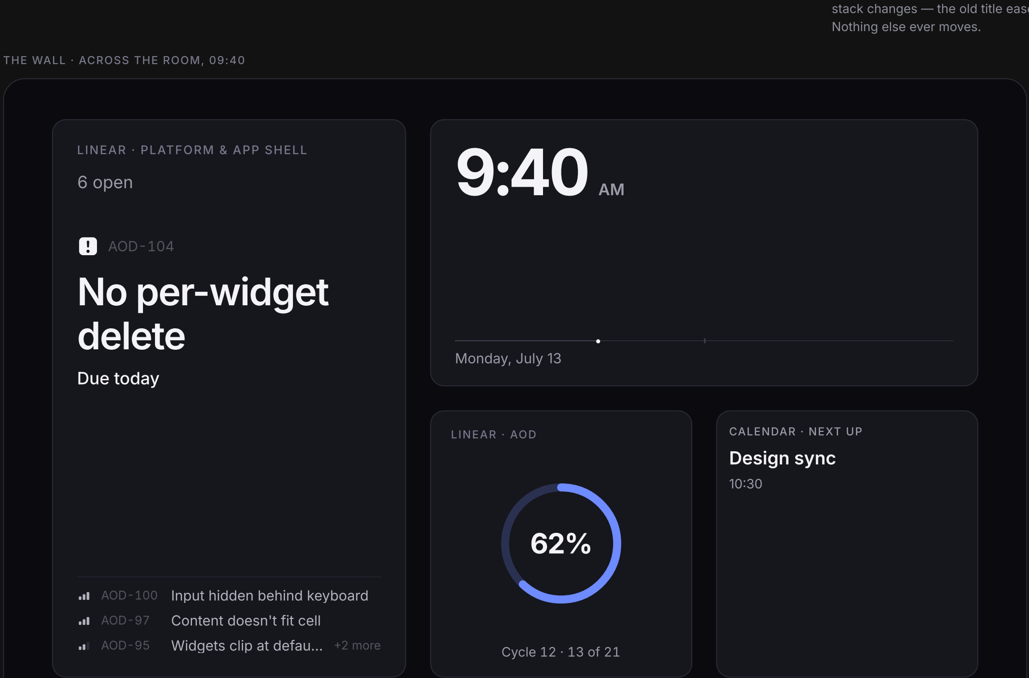

the banner — count, then the one issue that matters; the queue waits

PHONE · MONDAY, 09:40

The two Linear cards as a pair of Mediums: what to pull next, and how far the team is. The Heading's motion is the settle when the stack changes — the old title eases out, the next slides up. Nothing else ever moves.

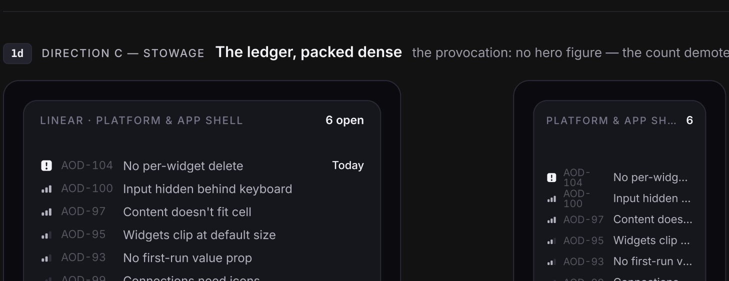

THE WALL · ACROSS THE ROOM, 09:40

The one question a work wall might answer better than a count: what do I pull next? At 38px the answer carries to the sofa. The flaw carries too — a wall that names one task all day reads as a demand, and ambient status must never nag. The Heading is the desk take wearing wall clothes.

1d DIRECTION C — STOWAGE The ledger, packed dense

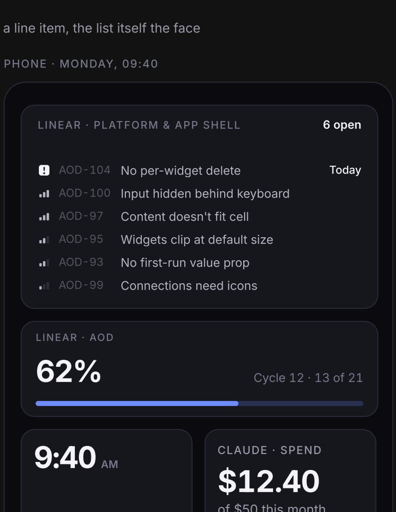

the provocation: no hero figure — the count demoted to a line item, the list itself the face

the Large — Linear's own list brought to the card; the count survives only as a header figure

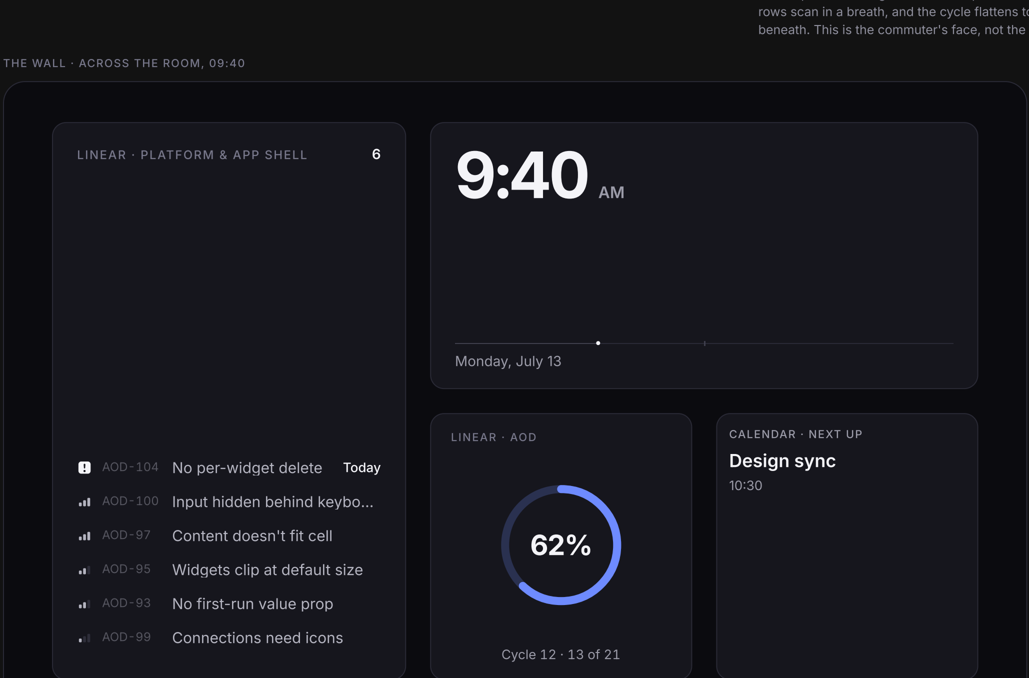

the Medium holds all six — titles truncate hard; the marks keep the ranking legible anyway. Stowage declines the 2×1: a one-row ledger is a contradiction, so the slot falls back to Muster's banner

PHONE · MONDAY, 09:40

On the phone Stowage earns its keep — held at arm's length, six rows scan in a breath, and the cycle flattens to its banner bar beneath. This is the commuter's face, not the wall's.

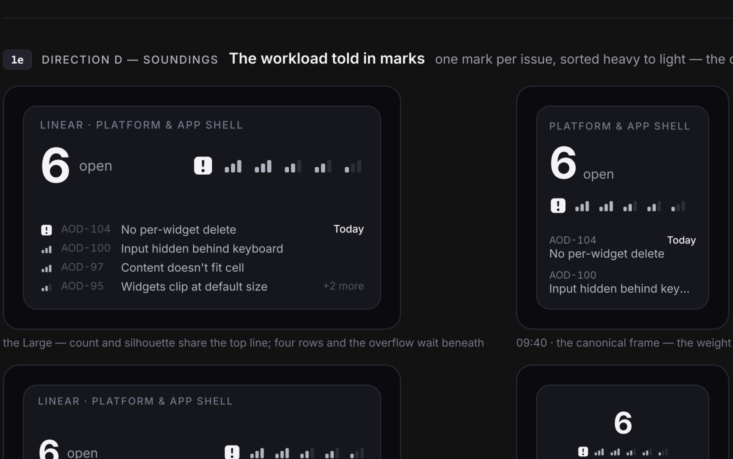

THE WALL · ACROSS THE ROOM, 09:40

The wall verdict, shown honestly: from the sofa the ledger is texture — six grey lines and a small 6. Stowage dies here the way The Log died for Weather; words don't carry across a room. It stays the strongest phone face in the set.

1e DIRECTION D — SOUNDINGS The workload told in marks

one mark per issue, sorted heavy to light — the count and its silhouette; how much, and how heavy, in one saccade

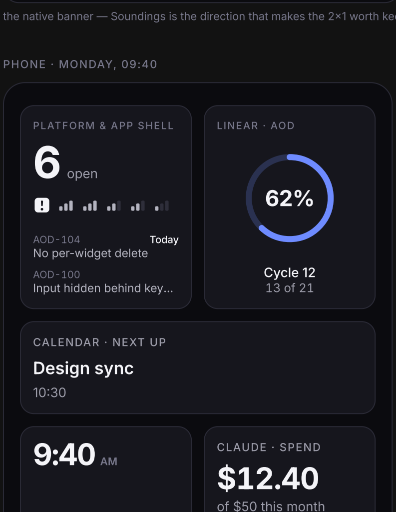

the Large — count and silhouette share the top line; four rows and the overflow wait beneath

09:40 · the canonical frame — the weight first, then the two that matter most; rows drop their glyphs, the spine already carries them

the native banner — Soundings is the direction that makes the 2×1 worth keeping

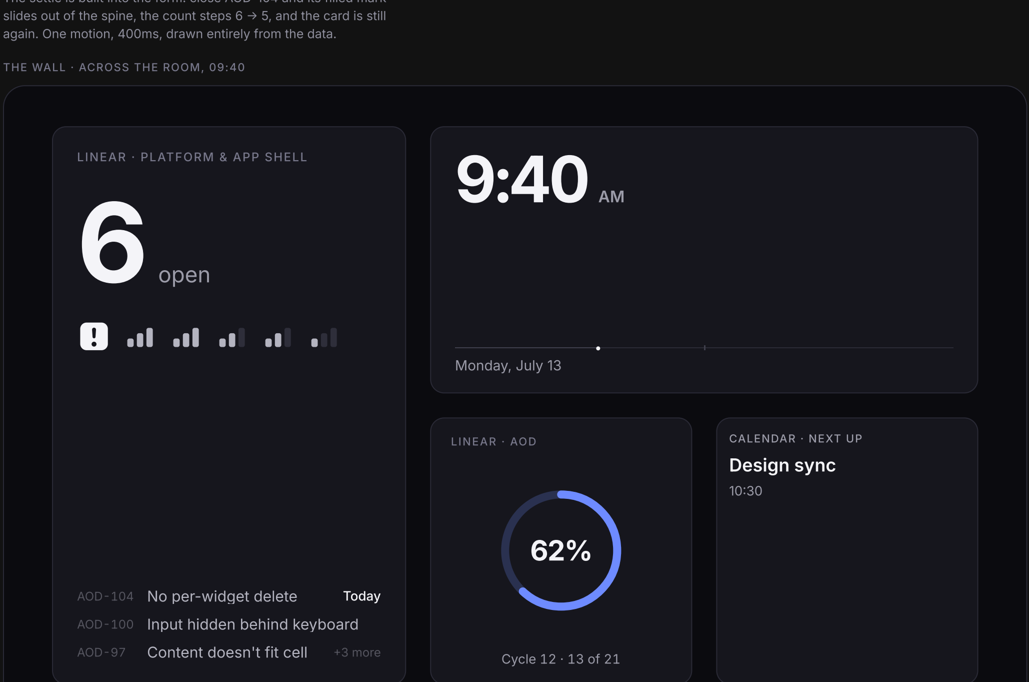

the one Small that varies — count over silhouette; still a single glance

PHONE · MONDAY, 09:40

The settle is built into the form: close AOD-104 and its filled mark slides out of the spine, the count steps 6 → 5, and the card is still again. One motion, 400ms, drawn entirely from the data.

THE WALL · ACROSS THE ROOM, 09:40

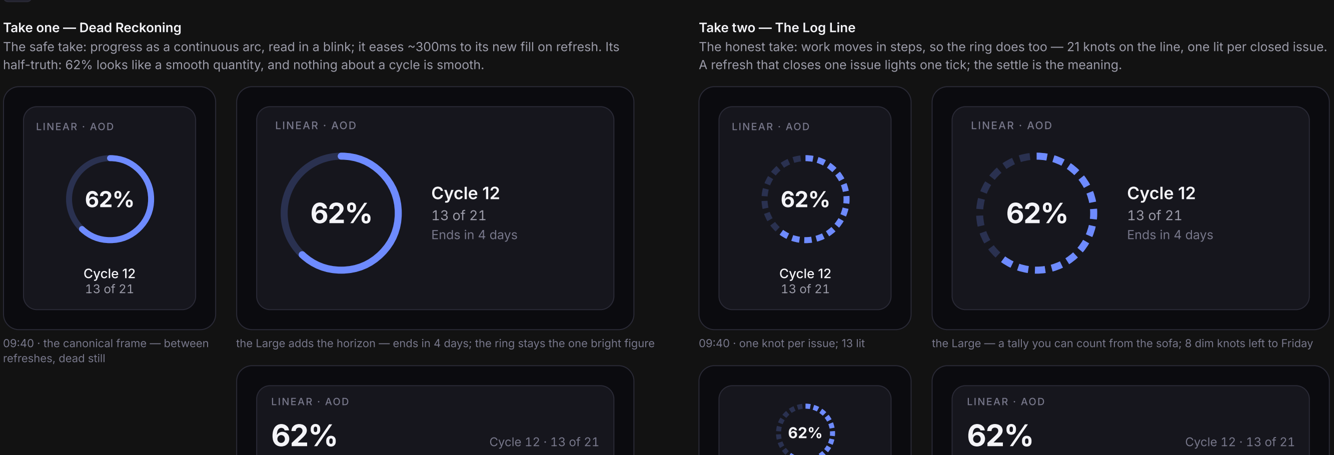

The across-the-room read no other direction owns: 6, and one filled block among the bars — an urgent exists — without reading a word. Marks carry where words can't; the rows are there for whoever walks close. This is the wall face of the set.

1f THE SECOND CARD — CURRENT CYCLE Two takes, one anatomy

the accent's only home: the fill bright, the remainder the same accent dimmed; the percent always the brightest thing

Take one — Dead Reckoning
The safe take: progress as a continuous arc, read in a blink; it eases ~300ms to its new fill on refresh. Its half-truth: 62% looks like a smooth quantity, and nothing about a cycle is smooth.

Take two — The Log Line
The honest take: work moves in steps, so the ring does too — 21 knots on the line, one lit per closed issue. A refresh that closes one issue lights one tick; the settle is the meaning.

09:40 · the canonical frame — between refreshes, dead still

the Large adds the horizon — ends in 4 days; the ring stays the one bright figure

the banner flattens the ring to a waterline bar — same anatomy, one row tall

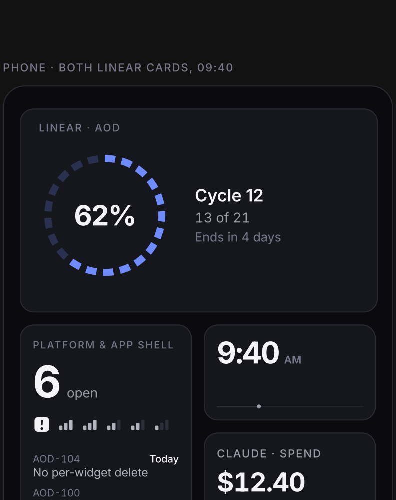

09:40 · one knot per issue; 13 lit

the Large — a tally you can count from the sofa; 8 dim knots left to Friday

the Small — the knots become texture; the percent carries the number

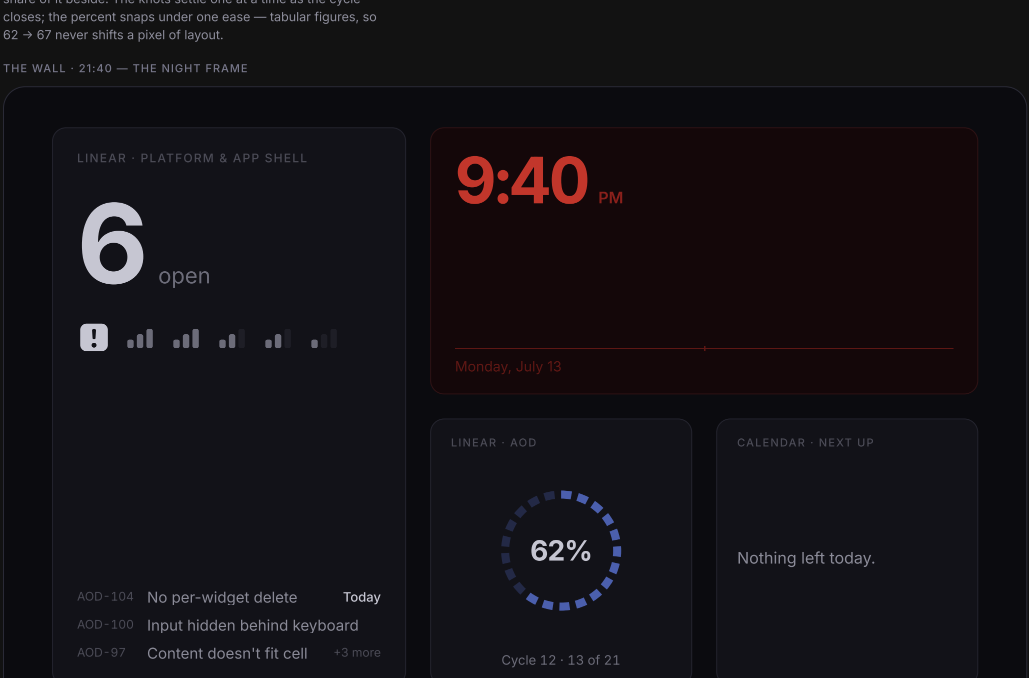

the banner keeps the quantization — 21 segments, 13 lit; the tally reads flat as well as round

PHONE · BOTH LINEAR CARDS, 09:40

Both Linear cards at full size: the team's crossing above, your share of it beside. The knots settle one at a time as the cycle closes; the percent snaps under one ease — tabular figures, so 62 → 67 never shifts a pixel of layout.

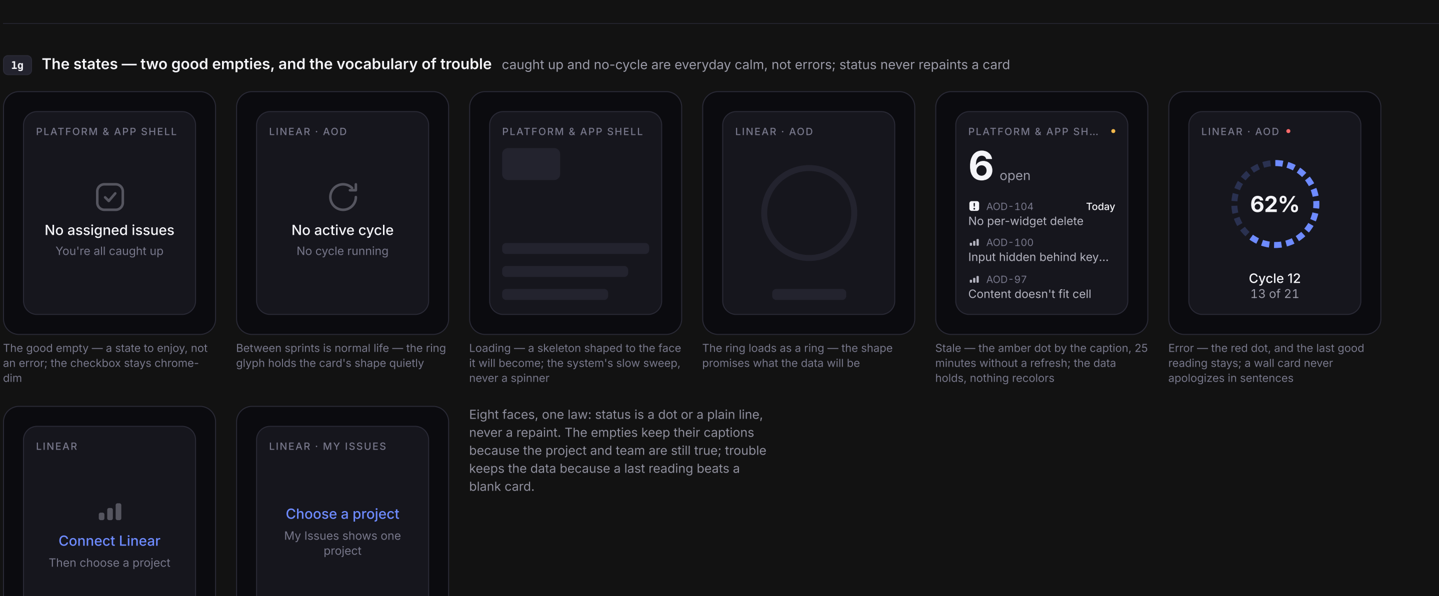

THE WALL · 21:40 — THE NIGHT FRAME

21:40 — the wall steps down as one. Ember belongs to the Clock alone; the Linear cards dim their normal palette, and the accent dims with them. The lists don't glow, don't recolor, don't move: after dark, work is just quietly there.

1g The states — two good empties, and the vocabulary of trouble

caught up and no-cycle are everyday calm, not errors; status never repaints a card

The good empty — a state to enjoy, not an error; the checkbox stays chrome-dim

Between sprints is normal life — the ring glyph holds the card's shape quietly

Loading — a skeleton shaped to the face it will become; the system's slow sweep, never a spinner

The ring loads as a ring — the shape promises what the data will be

Stale — the amber dot by the caption, 25 minutes without a refresh; the data holds, nothing recolors

Error — the red dot, and the last good reading stays; a wall card never apologizes in sentences

Disconnected — the whole card is the tap target; accent marks the one action, plainly

Unique to Linear: connected but unpointed. Current Cycle mirrors it — "Choose a team". The only face where the caption is the widget name, because there is no place yet

Eight faces, one law: status is a dot or a plain line, never a repaint. The empties keep their captions because the project and team are still true; trouble keeps the data because a last reading beats a blank card.

1h The call — Soundings, with The Log Line

and a live Log Line you can pay out yourself

Soundings (1e) is the recommendation for My Issues, paired with The Log Line (1f) for Current Cycle. They speak one language: **discrete work drawn as discrete marks** — a mark per issue on one card, a knot per issue on the other — and they share one grammar of change: something closes, one mark moves, the wall is still again. Muster (1b) is the free fallback; it is Soundings minus the spine, identical in every other decision.

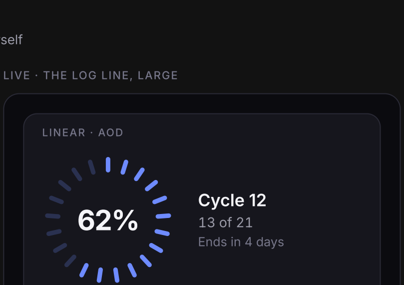

Marks carry where words can't
From the sofa Soundings reads count-and-weight without a word; one filled block says an urgent exists. Stowage (1d) died on the wall the way The Log died for Weather.

It answers a second question
Not just how many — how heavy. The spine is the workload's silhouette, built entirely from data the card already owns, the way Transit's arc was for Weather.

The settle is the form
Close AOD-104: its mark slides out, 6 settles to 5, a knot lights on the ring. Both Linear cards spend the whole motion budget on the one moment work actually moved.

What the losers taught
The Heading (1c) is the right desk face and the wrong wall — a named task all day is a nag. Keep it in the pocket for a future focus mode. Stowage stays the phone's dense option.

LIVE · THE LOG LINE, LARGE

Tweaks: pay out the line — drag completed from 0 to 21 and each knot lights with its own 400ms settle; refreshing shows the breath by the caption; night steps the whole card down, accent included. Between your changes it does exactly what it should: nothing.

Next: freeze the five marks (1a) against the RN pixel grid at their 11–34px duties; spike the 21-knot ring on the low-DPI wall tablet — if the ticks shimmer, Dead Reckoning is the fallback ring; wire the breath to the real 5/10-minute cadences; set the caption truncation rule for long project names; push the sort (urgent → due → number) into the data layer so the card never re-ranks twice.
