

1a **Made Fast** the color law, frozen — Running Lights' figures on Sailor's Delight's quieted panes · tokens, final faces, the night proof, and the law beyond Weather

The pick composes cleanly because the two layers never claim the same job: the pane owns the condition, the figures own the readings. The panes come back from Sailor's Delight pulled roughly forty percent toward the neutral surface — pigment, not poster — and the figures ride them exactly as Running Lights drew them: the thermometer from Vela blue to the sail's gold to the Clock's ember, rain in teal, the sun in gold, the moon pale on neutral ground and gold on the night pane, one violet bolt, and bone for every gray sky. Below: the frozen tokens (1a), the final Transit faces (1b), one Saturday in five moments (1c), the phone and the wall with the night proof (1d), the law on a card that isn't Weather (1e), and a live specimen running the whole thing on your clock (1f).

Two layers, two distances

The pane speaks first, from across the room — what the sky is. The figures answer on approach — how much, when. Neither repeats the other's job, so the card never says anything twice or contradicts itself.

A budget of three

A card lights at most three hues at once: the pane, the thermometer, one event ink. Everything else is bone. Forecast reads many skies at once, so it never wears a pane — it stays on the neutral surface with lit figures.

Deep panes, pinned lightness

Every pane sits within two headline stops of the neutral surface; the thermometer's lightness is pinned high and only its hue moves. That is what solves the warm case — gold on the golden-hour amber clears 7:1 by luminance alone (1c, 17:50).

Night is restful, and proven

Deep indigo pane, gold moon, cool temperature, beside the Clock's ember — three quiet lights, no two alike, none bright (1d). Every colored figure keeps its numeral or glyph beside it, hue is never the only carrier.

Scope: everything established holds — Transit geometry from Weather Eye unchanged; S 173×96 · M 173×204 · W 358×96 · L 358×204, the 1024×640 wall stage; Quito, Saturday July 11 2026 at 06:40 · 14:32 · 16:20 · 17:50 · 21:40; sun 06:11 → 18:16; metric; the hero value is always the brightest thing on its card. Web stands in for React Native. This is the freeze — what's below is what we build.

1a The tokens — frozen three families: the thermometer, the event inks, the panes; these names go into unistyles.ts verbatim

The panes, quieted — every one pulled ~40% from Sailor's Delight toward the neutral surface, all within two headline stops of #161610 so the pinned-lightness figures always win. Rain, drizzle, storm, cloudy, fog and snow ignore the hour — gray weather owns its color outright; clear and party carry first light, day, golden and night variants. Current Weather is the only card that ever wears one.

1b Weather Eye, final — the four footprints Transit geometry untouched, 14:32 canonical — the party-day pane under the warm 17°, the sun-mark in gold; wind drops first, then humidity, then feels-like, then the label — the figure and the glyph, never

Forecast Wide, final — no pane, ever: it reads five skies at once, so it stays on the neutral surface and lets the figures carry all the color; warm highs over cool lows, rain in teal, Wednesday's one violet bolt

The ladder from Weather Eye holds rung for rung — space runs tight and wind goes first, then humidity, then feels-like, then the label: the figure and the glyph, never. The pane is the one element that survives every footprint: even the smallest face knows what the sky is before you can read a numeral.

1c One Saturday, five skies the Large face through the day — the pane follows the sky, the thermometer follows the air, and the two never say the same thing

WEATHER · QUITO 06:40

9°

Clear

Feels 8° · 91% · 6 km/h E

06:11 18:16

06:40 · first light — the rose pane, a cold blue 9°, the sun-mark just off the horizon

WEATHER · QUITO 14:32

17°

Partly cloudy

Feels 16° · 78% · 9 km/h SE

06:11 18:16

14:32 · the canonical frame — slate pane, warm gold 17°, cool ground, warm figure, no fight

WEATHER · QUITO 16:20

16°

Rain

Feels 15° · 84% · 11 km/h S

06:11 18:16

16:20 · the rain spell — petrol pane, teal strokes, and a still-mild 16°, the sun-mark keeps its gold behind the weather

WEATHER · QUITO 17:50

15°

Clear

Feels 14° · 74% · 7 km/h SE

06:11 18:16

17:50 · golden hour — the warm case, solved: mild-gold 15° on the amber pane clears 7:1 because the pane sits near 7% luminance and the figure near 50%; hue kinship is allowed, lightness does the work, and "Clear" sits beside the numeral saying it in words

WEATHER · QUITO 21:40

11°

Clear night

Feels 10° · 88% · 6 km/h E

06:11 18:16

21:40 · clear night — indigo pane, gold moon, cool silver 11°; the arc lying spent; the card finally looks like the night instead of a dimmer afternoon

WEATHER · QUITO

17°

Partly cloudy

Feels 16° · 78% · 9 km/h SE

06:11 18:16

Five skies, one geometry. The pane names the condition before a single numeral resolves; the thermometer tells you whether to take a jacket; the sun-mark keeps the day. Nothing here is decoration — every hue on every card is one of the six readings, wearing its own color.

1d On the phone, on the wall — and the night proof one pane per surface, everything else neutral; judged at 14:32 from the sofa and at 21:40 from the bed

The proof. Three lights, no two alike, none bright: the Clock's ember says the hour, the indigo pane says the sky, the forecast's small warm-and-cool figures say the week — all of it sitting below the luminance of a single white numeral at noon. Nothing pulses, nothing saturates, nothing asks to be watched. This is a room you can sleep next to.

1e A system, not a Weather trick the same law on cards that never see the sky — figures only, no pane; one fixed scale per service, learned once

CLAUDE · SPEND RIDES THE THERMOMETER TOWARD ITS BUDGET

CLAUDE · SPEND

\$12.40

of \$50 this month

25% spent — cold; a quarter in, all quiet

CLAUDE · SPEND

\$41.80

of \$50 this month

84% spent — balmy; the number is getting warm, and says so itself

CLAUDE · SPEND

\$52.30

\$2.30 over budget

over — ember; the label says it in words, the hue only agrees

LINEAR · MY ISSUES

6

2 in progress

on track — bone; a count with nothing to report stays a count

LINEAR · MY ISSUES

6

2 overdue

breach — hot; "overdue" carries the meaning, the hue carries it across the room

The law, service-shaped: a hero figure may wear the hue of what it measures, on one fixed scale per service, and only when it has something to say. No panes — the sky is the only field that carries one. Status stays what it was: a dot for stale, a dot for error; the thermometer never reports trouble, only readings. Calendar has no scale at all — a overing isn't hot — and that refusal is part of the system too.

1f Made fast the direction is frozen; a live specimen runs the whole law on your clock

Frozen: the bind thermometer owns the five event inks, the twelve panes, and the four laws that bind them — pane owns the condition, figures own the readings, three hues per card, hue never alone. Everything else from Weather Eye stands: Transit geometry, the ladder, the motion budget, the refresh cadence, the trouble states with their dots.

Next: land --temp-*, --ink-* and --pane-* in unistyles.ts against these hexes; RN spike on the low-DPI wall tablet in a dark room — verify the panes hold flat (no banding) and the hairlines survive; protanopia and deuteranopia pass on the thermometer the pinned lightness is most of the answer — confirm it; freeze the two-tone glyph inks into the icon set; wire pane transitions to the condition change, 200 ms, calm ease; then re-cut The Watch's night frames beside the indigo pane so ember and indigo are tuned together, once, and never argued about again.

LIVE · THE FROZEN LAW ON THIS DEVICE'S CLOCK

WEATHER · QUITO 13:57

17°

Partly cloudy

Feels 16° · 78% · 9 km/h SE

06:11 18:16

Pane by condition and daylight, thermometer on the figure, gold on the sun-mark — blending between bands on your clock, mapped to Quito's 06:11 → 18:16. Tweaks: force a moment, swap the condition. Set it to Rain at Night and check the room could sleep next to it; that test is the whole direction.
